Research Papers

A time scale for granitoid emplacement in the Archean Murchison Province, Western Australia, by single zircon geochronology
M. Wiedenbeck (Canberra, A.C.T., Australia) and K.P. Watkins (East Perth, W.A., Australia) 1

Sm–Nd, U–Pb, and Rb–Sr geochronology and lithostructural relationships in the southwestern Rae province: constraints on crustal assembly in the western Canadian shield
C.H. Crocker, K.D. Collerson (Santa Cruz, CA, USA), J.F. Lewry (Regina, Sask., Canada) and M.E. Bickford (Syracuse, NY, USA) 27

Late Archaean thrusting in the Northwestern Pontiac Subprovince, Canadian Shield
G.E. Camiré and J.-P. Burg (Montpellier, France) 51

Tectono-metamorphic evolution of the simatic basement of the Pietersburg greenstone belt relative to the Limpopo Orogeny: evidence from serpentinite
J.F. Van Schalkwyk (Johannesburg, South Africa), M.J. de Wit (Rondebosch, South Africa), C. Roering and D.D. van Reenen (Johannesburg, South Africa) 67

A petrological and Rb–Sr isotopic study of an early Archean fertile granite–pegmatite system: the Sinceni Pluton in Swaziland
R.B. Trumbull (Garching, Germany) 89

Accretionary lapilli associated with Archaean banded iron formations of the Kraaipan Group, Amalia greenstone belt, South Africa
I.M. Jones (Pretoria, South Africa) and C.R. Anhaeusser (Johannesburg, South Africa) 117

Geochemical signatures of polygenetic origin of a banded iron formation (BIF) of the Archaean Sandur greenstone belt (schist belt) Karnataka nucleus, India
C. Manikyamba, V. Balaram and S.M. Naqvi (Hyderabad India) 137

Discussion

Proterozoic tectonic evolution and metallogenesis in the Aravalli–Delhi orogenic complex, northwestern India—Comment
R.L. Munshi and V.S. Bapna (Jaipur, India) 165

Proterozoic tectonic evolution and metallogenesis in the Aravalli–Delhi orogenic complex, northwestern India—Reply
M. Deb and S.C. Sarkar (Delhi, India) 168

Foreword 169

Toward a working nomenclature and classification of organic matter in Precambrian (and Phanerozoic) sedimentary rocks
D.J. Mossman (Sackville, N.B., Canada) and C.L. Thompson-Rizer (Ponca City, Okla., USA) 171

Optical description of amorphous kerogen in both thin sections and isolated kerogen preparations of Precambrian to Eocene shale samples
C.L. Thompson-Rizer (Ponca City, Okla., USA) 181

Microtextures in mudrocks as revealed by backscattered electron imaging
D. Krinsley (Eugene, Ore., USA), B. Nagy (Tucson, Ariz., USA), H. Dypvik (Oslo, Norway) and M. Rigali (Tucson, Ariz., USA) 191

A review of apatites, iron and manganese minerals and their roles as indicators of biological activity in black shales
H.C.W. Skinner (New Haven, Conn., USA) 209

Isolation and physiology of a manganese-reducing *Bacillus polymyxa* from an Oligocene silver-bearing ore and sediment with reference to Precambrian biogeochemistry
P.A. Rusin, J.E. Sharp, K.L. Oden, R.G. Arnold and N.A. Sinclair (Tucson, Ariz., USA) 231

Paleontology of Proterozoic shales and mudstones: examples from the Belt Supergroup, Chuar Group and Pahrump Group, western USA
R.J. Horodyski (New Orleans, La, USA) 241

Characterization of insoluble organic matter from the Lower Proterozoic Huronian Supergroup, Elliot Lake, Ontario
D.J. Mossman (Sackville, New Brunswick, Canada), F. Goodarzi (Calgary, Alberta, Canada) and T. Gentzis (Devon, Alberta, Canada) 279

Relationship of stratabound ores with tectonic cycles of the Phanerozoic and Proterozoic
S.R. Titley (Tucson, Ariz., USA) 295
